DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
3. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 19,751,151 A1. The reference discloses perfume oil microemulsions comprising 10-50% by weight of perfume oil, 1-10% by weight of an oil component, 1-30% of an alkylpolyglycoside emulsifier and, optionally, a cationic co-emulsifier (p. 4, lines 5+). Suitable cationic emulsifiers include ester quats (p. 4, lines 52+), and mono- or di(long chain) quats. See examples as well. The compositions are described as clear. Use of water-miscible solvents is disclosed at p. 5, lines 1+. Dyes, fluorescing agents and optical whitening agents may be added (p. 4, lines 60-61). If the perfume, oil and emulsifier are used at the high end of the disclosed range, water, which makes up the

balance of the compositions, will be present at about 10%, and the compositions will be water-in-oil microemulsions. The limitations of claims 5-7 reflect typical levels of dye usage, solubility of perfume oils in water and solubilities of common sulfonic acid dyes and fluorescing agents. The recited perfume to dye ratio can be met by using the disclosed amount of perfume and amounts of dye which are commonly encountered in surfactant compositions. Table 3 discloses the use of the compositions in fabric softening compositions. This reference differs from the claimed subject matter in that it does not disclose a composition which reads on applicant's claims with sufficient specificity to constitute anticipation.

It would have been obvious at the time the invention was made to make such a composition, because this reference teaches that all of the ingredients recited by applicants are suitable for inclusion in a surfactant composition. The person of ordinary skill in the surfactant art would expect the recited compositions to have properties similar to those compositions which are exemplified, absent a showing to the contrary.

In the case where the claimed ranges overlap or lie inside ranges disclosed by the prior art, a *prima facie* case of obviousness exists. *In re Wertheim*, 541 F.2d 257, 191 USPQ 90 (CCPA 1976); *In re Woodruff*, 919 F.2d 1575, 16 USPQ2d 1934 (Fed Cir. 1990).

4. Any prior art made of record and not relied upon is of interest and is considered pertinent to applicant's disclosure.
